Get It Done User's Manual

Running the program

The program must be run in an Android VM or by using Android Studio. This will display the Menu screen in the virtual machine. For input, you may use the mouse to click on the different Events on the menu. You can create an Event using the plus button above, this will take you to the Event screen where a title and tasks can be set. Once those are set, clicking on the back button will take you back to the Menu screen. In the Event screen, you can check the alert toggle, take a picture, and set a date. The minus button on the Event screen will delete your event.

Output

All of the output will be displayed on a virtual machine. A Menu and an Event screen will be used to display the Events and Tasks as well as pictures and dates.
